### PREOJECTS SUMMARY

#### BE Project:

Title: 'Smart Surveillance System'

Description: Smart Surveillance System is a software used to find the presence of a particular person number of videos. In our system, we accept an image from the user which consists of the subject to be found in the video. Then we will process the videos stored in the computer file system for the input image to find the target person in the video. The system will automatically identify the person in the videos, hence there is no need of a person to analyze the complete video manually. The computer system has higher processing speed. As a result it speed up the process of identification.

Software used: PyCharm.
